The sequences given in AAR32927-35 are casein phosphopeptides which can be used to inhibit dental calculus. These peptides are pref. in the form of salts selected from alkaline metal, alkaline earth metal salts such as Na, Ca, Zn, Cu, Al, K, Sr, Mg and Ni salts. These peptides are pref. present as a Zn/phosphopeptide complex or aggregate. these peptides have anti-calculus potential, and are anti-caries and anti-
                                                                                                                                                                             Controlling dental calculus by treating teeth with oral compsns. which contains phospho-peptide(s) having 5-40 amino-acyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Casein phosphopeptide; dentinal hypersensitivity; therapy; tooth.

purpose continuous of the proper present of the property of the present of the property of a specifically claimed complex.
derivative, where the phosphopeptide includes the amino acid sequence: Ser(P)-Ser(P)-Glu-Glu. The amorphous phases stabilised by the phosphopeptides are a delivery vehicle for co-localisation of Ca, P and phosphate at the tooth surface in a slow-release amorphous producing superior anticaries efficacy over prior art. The amorphous phases stabilised by the phosphopeptides are also useful as dietary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "post-translationally phosphorylated serine"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "post-translationally phosphorylated serine"

The sequences given in AAR32927-35 are casein phosphopeptides which can be used to inhibit dental calculus. These peptides are pref. in the form of Salts selected from alkaline metal, alkaline earth metal salts such as Na, Ca, Zn, Cu, Al, K, Sr, Mg and Ni salts. These peptides are pref. present as a Zn/phosphopeptide complex or aggregate. these peptides have anti-calculus potential, and are anti-caries and anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
Controlling dental calculus by treating teeth with oral compsns. - which contains phospho-peptide(s) having 5-40 amino-acyl residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Casein phosphopeptide; dentinal hypersensitivity; therapy; tooth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ser(P) = post-translationally phosphorylated serine. A mixture of casein phosphopetides (CPP) and/or their salts may be used in a method for treating dentinal hypersensitivity. Pref. those CPPs contg. the sequence -Ser(P)-Ser(P)-Ser(P)- predominate. The CPPS can be extracted from a casein digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treatment of dentinal hypersensitivity - using casein, compon of casein, phospho-protein or phospho-peptide or their salts

These peptides were stabilised by an anionic polymeric stabiliser. The anionic polymers were chosen from a group consisting of carboxylate polymers, sulfonate polymers, polymers having both a carboxylate as sulfonate moiety, and other such mixtures. The anionic polymeric stabiliser inhibits destabilisation of the phosphopeptide in the oral environment. These oral compositions, pref. containing a fluoride source may be used for inhibiting caries and gingivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tryptic digest of casein. The peptide may be used with an anticalculus agent, e.g. alkali metal pyrophosphate, in a compsn. for controlling dental tartar. The compsn. inhibits conversion of bybrushite and amorphous calcium phosphpate into the more stable hydroxyapatite on the teeth. The compsn. is used in the form of a mouthwash, toothpaste, gel, lozenge or chewing gum, for care of the teeth and tartar control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The peptide sequence is that of a phosphopeptide prepd. from a tryptic digest of casein. The peptide may be used with an anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Phospho-peptide(s) for dental tartar control - are included in compsns. With pyrophosphate(s) or zinc salts to provide good inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó

The peptide may be prepd. by completely digesting casein in soln. with a proteolytic enzyme, adding mineral acid to the soln. to adjust the pH to 4.7, removing any precipitate, adding calcium chloride to cause aggregation of the peptides in soln. and separating the aggregation of the peptides. This method allows prodn. the phosphopeptide by industrial methods. The phosphopeptide of the phosphopeptide activity and may be used as a dietectic. The peptide may be used in a microbiological growth medium, as a dietary supplement or as a fertiliser.
  /note= "post-translationally phosphorylated serine"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR3293
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                alpha(s1) and alpha(s0). The peptides contain the amino acids phosphoserine, phosphothreonine, phosphotyrosine or phosphohistidine, and include in their sequence asparate and glutemate. The phosphopeptides form part of a novel composition containing the peptide dispersed uniformly in a crystal mix of sugars chosen from sorbitol, mannitol, xylitol, lactitol, cellobitol or mixtures of sorbitol/mannitol or sorbitol/xylitol. The compositions can be used instead of conventional sugars to manufacture confectionary products. The phosphopeptides are known to inhibit caries and gingivitis and can act as a source of calcium ions to promote/enhance remineralisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptides (AAR68936-40) are phosphopeptides resulting from the tryptic digestion of sodium caseinate. The peptide shown here is derived from the TCPK-tryptic digest of alpha(s1).caseinate (comprising alpha(s1) and alpha(s0)). The peptides contain the amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "post-translationally phosphorylated serine"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "post-translationally phosphorylated serine"

                                                                                                                                                                        Ser(P) = post-translationally phosphorylated serine. A mixture of casein phosphopeptides (CPP) and/or their salts may be used in a method for treating dentinal hypersensitivity. Pref. those CPPs contg. the sequence -Ser(P)-Ser(P)-Ser(P)- predominate. The CPPs can be extracted from a casein digest.

Sequence 2, Application US/10029382
Patent No. US20020164618A1
GENERAL INFORMATION
APPLICANT: DIVERSA CORPORATION
APPLICANT: CALLEN, Walter
APPLICANT: MATHUR, Eric
TITLE OF INVENTION: ENZYMES HAVING HIGH TEMPERATURE POLYMERASE ACTIVITY AND METHOD
TITLE OF INVENTION: THERROF
FILE REFERENCE: DIVER1350-2
CURRENT APPLICATION NUMBER: US/10/029,382
CURRENT FILING DATE: 2001-12-21
PRIOR PILING DATE: 2000-09-06
PRIOR FILING DATE: 2000-09-06
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OTHER INFORMATION: Xaa equals any of the naturally occurring L-amino acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2, Application US/08834666A
Patent No. US20020044949A1
GENERAL INFORMATION:
APPLICANT: Kleanthous, Harold
APPLICANT: Lissolo, Ling
APPLICANT: Tomb, Jean-Francois
APPLICANT: All-lar, Charles
APPLICANT: Al-Garawi, Amal
TITLE OF INVENTION: 76 kDa Helicobacter Polypeptides and
TITLE OF INVENTION: Corresponding Polynucleotide Molecules
NUMBER OF SEQUENCES: 64
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 39.8%; Score 33; DB 10; Length 305; Best Local Similarity 36.8%; Pred. hypothetical protein YOL109w - yeast (Saccharomyces cerevisiae)

N.Alternate names: hypothetical protein 00738

S.Species: Saccharomyces cerevisiae
C;Date: 12-Jul-1996 #sequence_revision 12-Jul-1996 #text_change 06-Feb-1998
C;Accession: S66805
A;Recence number: S66791
A;Recence number: S66791
A;Recence number: S66805
A;Rocsidues: 1-113 CDNA
A;Restimental Source: strain S288C
